Summary & Key Findings

North Lanarkshire Incapacity Benefit claimant Profile

1. This incapacity benefit (IB) claimant profile for North Lanarkshire gives detailed information on IB claimants by sex, age, reason for claiming IB and length of time on IB. It also contains IB claimant rates for the 73 intermediate zones in North Lanarkshire (in 2008, Craigneuk Wishaw had the highest IB rate at 22.8% and Carrickstone the lowest rate at 3.8%).

2. In 2008 there were 23,790 IB claimants in North Lanarkshire. The IB rate, on flow rate and off flow rate were determined for North Lanarkshire from 2000 to 2008. The percent of the working age population claiming IB has decreased from 15.6% to 11.6% from 2000 to 2008. The rate of on flow has decreased from 4.7% to 3.0% and the off flow rate has increased from 26.7% to 30.0%.

3. The proportion of male and female 'credits only' IB claimants (those with a poor work history) have increased from 2000 to 2008. There are more female 'credits only' than males.

4. The proportion of each age group who are claimants rises with age, peaking in the 60-64 age group. However there are decreases in all age groups over time. North Lanarkshire has a higher proportion of the working age population on IB compared to Scotland in every age group. For example, in 2008 24.1% of 55-59 year olds in North Lanarkshire were claiming IB compared to 16.6% in Scotland.

The percentage of 'payment' IB claimants increases with age with the majority of claimants aged over 40. The age of 'credits only' claimants is more evenly distributed across age categories.

The on flow is more evenly distributed across the age categories.

Off flow rates are higher for people under 30 and in particular the 16-17 and 18-19 age groups.

5. The main reason for claiming IB is 'mental and behavioural disorders' which has increased from 2000 to 2008. In 2008 42.8% of all IB claimants were claiming because of a mental health problem in North Lanarkshire, compared with 45.2% in Scotland.

The rate of claiming IB due to mental health has been determined for the 73 intermediate zones in North Lanarkshire.

6. The majority of claimants have been claiming for more than two years, with 59.1% claiming for over 5 years in North Lanarkshire in 2008.

Off flow rates decrease dramatically as length of time on IB increases.

7. This profile highlights the striking levels of inequality in the level of worklessness related to ill health. While the overall trend is of improvement, this profile confirms a continuing need to prioritise interventions which can improve social inclusion and work capacity.

The Scottish Observatory for Work and Health is funded by the Glasgow Centre for Population Health, NHS Greater Glasgow and Clyde, NHS Lanarkshire, Scottish Centre for Healthy Working Lives and the Scottish Government Health Directorates. We are grateful to DWP for providing these data.

North Lanarkshire Incapacity Benefit Claimant Profile

Introduction

Incapacity benefit (IB) is the key contributory benefit for people who are incapable of work because of illness or disability.

This profile is one of fourteen incapacity benefit profiles that have been produced by the Scottish Observatory for Work & Health using DWP data. Each profile examines the “stock” of IB claimants and the “on” and “off” flow to IB. Each profile provides the following data on IB claimants from 2000 to 2008:

1. A ‘bath water’ diagram
2. IB rates (% of working age population claiming IB)
3. On flow rates (expressed as a percent of the WAP not on IB)
4. IB off flow rates (expressed as a percent of the total IB population)
5. IB claimants by neighbourhood/intermediate zone
6. Breakdown of IB claimants by sex
 - IB rate by sex
 - On flow rate by sex
 - Off flow rate by sex
 - Payment/credits by sex
7. Breakdown of IB claimants by age
 - IB rate by age
 - On flow rate by age
 - Off flow rate by age
 - Payment/credits by age
8. Breakdown of IB claimants by reason for claiming IB
 - Total claimants by illness
 - Comparison of mental health and musculoskeletal claimants
 - Mental Health IB rate
 - On flow by illness
 - Off flow rate by illness
 - Mental Health IB claimants by neighbourhood/intermediate zone
9. Breakdown of IB claimants by length of time on IB
 - Total claimants by length of time on IB
 - Off flow rate by length of time on IB
10. Off flow destination *restricted access*

Comparisons with Scotland are shown.

Individual profiles are available for the following geographies:

Scotland
Local authorities
Glasgow City
North Lanarkshire
South Lanarkshire
East Dunbartonshire
East Renfrewshire
Inverclyde
Renfrewshire
West Dunbartonshire
Community Health & Care Partnerships
East Glasgow

North Glasgow
South East Glasgow
South West Glasgow
West Glasgow

An **overview IB claimant profile** has also been produced which compares IB rates and on and off rates and shows 'bath water' diagrams for all geographies.

Yearly stock data have been calculated by taking a mean of the data from four quarters. For example, yearly data for 2008 were calculated by taking a mean of the data from the four quarters commencing December 2007 and ending in November 2008.

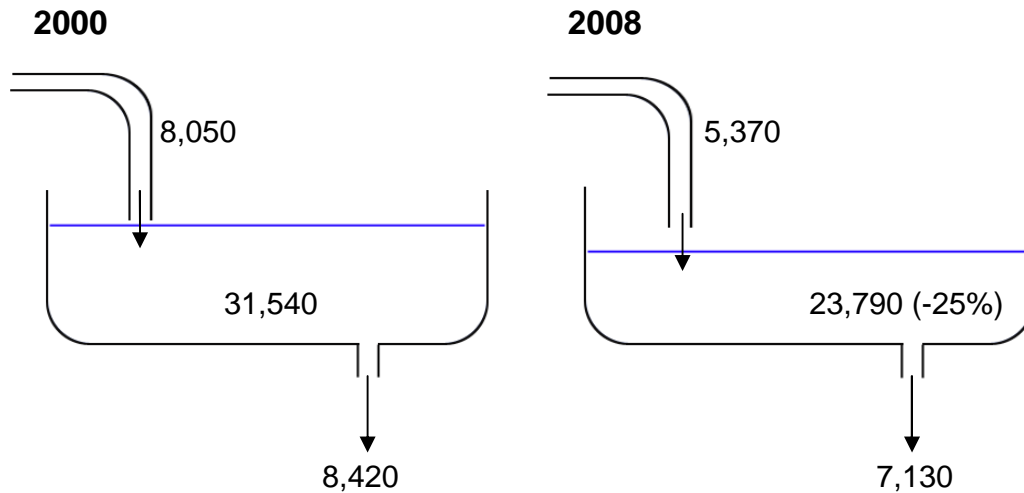

The on and off flow data have been computed into yearly data. For example, data for the year 2008 are the sum of the four quarters from December 2007 to the quarter ending November 2008.

This profile investigates IB claimants in North Lanarkshire from 2000 to 2008. There are important changes with DWP data for 2008. Employment and Support Allowance (ESA) was introduced on the 27th October 2008 and replaced IB and Income Support paid on incapacity grounds for *new* customers only. ESA claimants are not included in the IB figures for 2008.

1. Bath water diagram

Figure 1

North Lanarkshire

We have previously created a dynamic model of the IB population using a 'bath water' analogy.^{1,2} The 'bath water' diagrams detail the incapacity benefit population (those claiming IB at any given time), the on flow (those starting to claim IB) and the off flow (those whose claim has terminated) in a given year. The population on IB are represented by the amount of bath water. The on and off flow populations are represented by the tap water and the outflow respectively. Bath water diagrams are shown for 2000 and 2008 for North Lanarkshire (figure 1). They show that the decrease in the population on IB is mainly due to decreases in the on flow rather than increases in the off flow. However in order to fully understand the on and off flow data the numbers need to be expressed as on and off flow *rates* – see 3 & 4.

2. IB Rates

Figure 2 shows IB rates from 2000 to 2008 for Scotland and North Lanarkshire and are expressed as the number of IB claimants as a percent of the working age population (WAP).

Figure 2

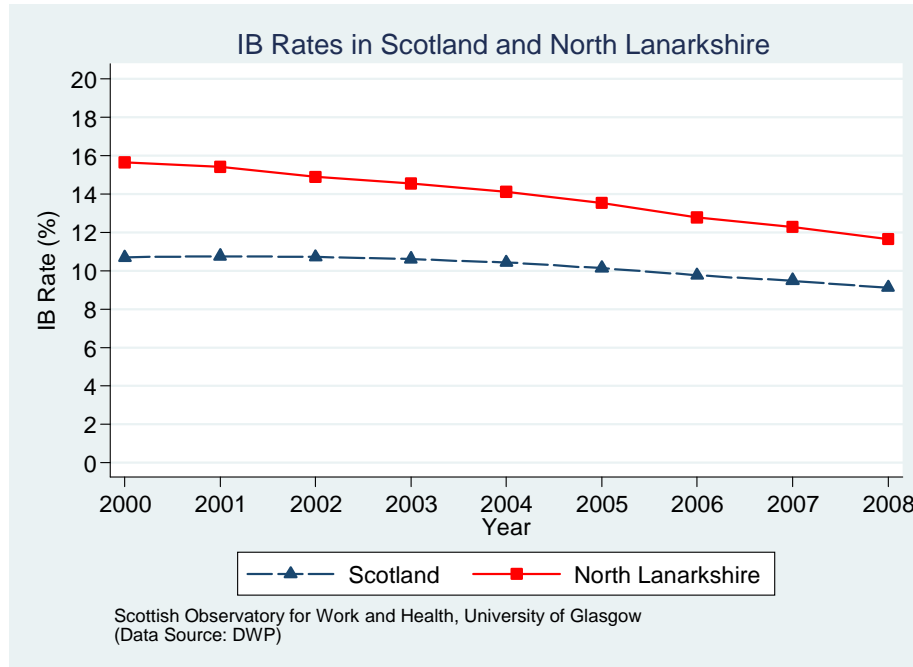

Table 1 shows the IB rates for North Lanarkshire from 2000 to 2008

| Year | IB rate (%) |
|------|-------------|
| 2000 | 15.6 |
| 2001 | 15.4 |
| 2002 | 14.9 |
| 2003 | 14.5 |
| 2004 | 14.1 |
| 2005 | 13.5 |
| 2006 | 12.8 |
| 2007 | 12.3 |
| 2008 | 11.6 |

The percent of the working age population claiming IB has decreased from 15.6% to 11.6% from 2000 to 2008 for North Lanarkshire.

3. On flow rates

Figure 3 shows on flow rates from 2000 to 2008 for Scotland and North Lanarkshire and are expressed as a percent of the WAP not on IB. This is the ‘population at risk’ of moving into IB.

Figure 3

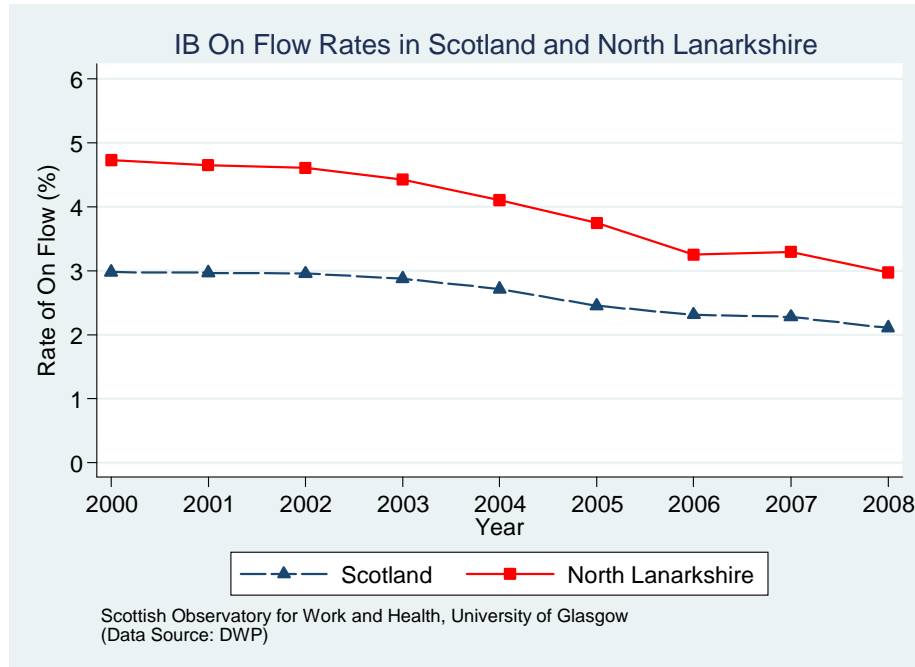

Table 2 shows the IB on flow rates for North Lanarkshire from 2000 to 2008.

| Year | On flow rate (%) |
|------|------------------|
| 2000 | 4.7 |
| 2001 | 4.6 |
| 2002 | 4.6 |
| 2003 | 4.4 |
| 2004 | 4.1 |
| 2005 | 3.7 |
| 2006 | 3.3 |
| 2007 | 3.3 |
| 2008 | 3.0 |

The rate of on flow has decreased in North Lanarkshire. There has been a drop of 1.7 percentage points for North Lanarkshire from 2000 to 2008 and a drop of 0.8 percentage points for Scotland.

4. Off flow rates

Figure 4 shows off flow rates from 2000 to 2008 for Scotland and North Lanarkshire and are expressed as a percent of the total IB population. This is the 'population at risk' of moving off IB.

Figure 4

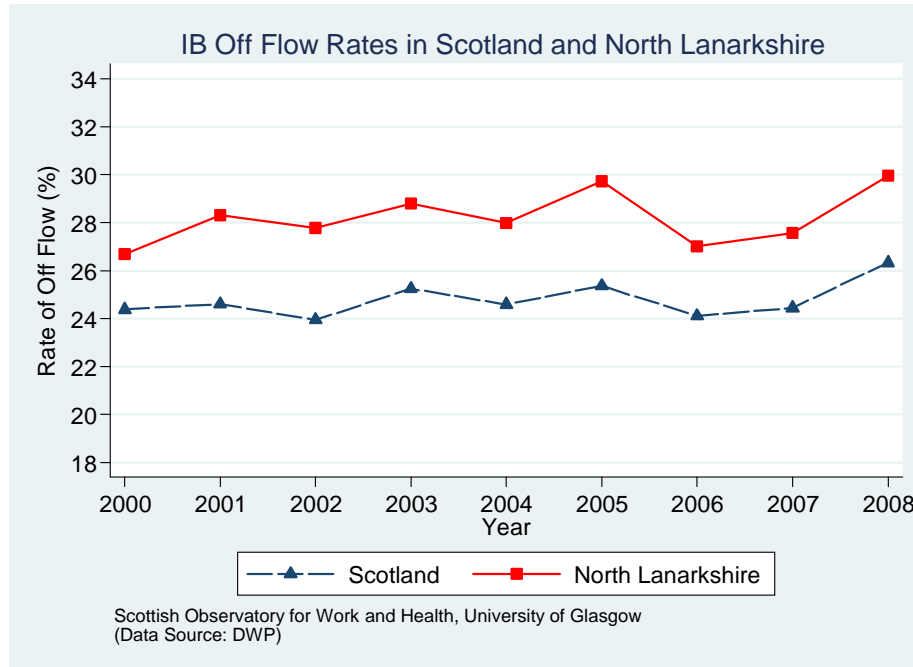

Table 3 shows the IB off flow rates for North Lanarkshire from 2000 to 2008

| Year | Off flow rate (%) |
|------|-------------------|
| 2000 | 26.7 |
| 2001 | 28.3 |
| 2002 | 27.8 |
| 2003 | 28.8 |
| 2004 | 28.0 |
| 2005 | 29.7 |
| 2006 | 27.0 |
| 2007 | 27.6 |
| 2008 | 30.0 |

The off flow rates are more variable in North Lanarkshire and Scotland between 2000 and 2008. North Lanarkshire's off flow rate has increased from 26.7% in 2000 to 30.0% in 2008.

5. IB claimants by neighbourhood

Table 4 shows the number of IB claimants in the 73 intermediate zones in North Lanarkshire from 2000 to 2008.

Table 4

| North Lanarkshire | Number of IB claimants | | | | | | | | |
|---------------------------------------|------------------------|------|------|------|------|------|------|------|------|
| | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 |

Scottish Observatory for Work and Health, University of Glasgow
(Data Source: DWP)

Table 5 shows IB rates from 2000 to 2008 in the 73 intermediate zones in North Lanarkshire and are expressed as the number of IB claimants as a percent of the working age population (WAP).

Table 5

| North Lanarkshire | IB Rate (%) | | | | | | | | |
|---------------------------------------|-------------|------|------|------|------|------|------|------|------|
| | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 |
| Abronhill North | 11.4 | 11.9 | 11.6 | 11.7 | 11.6 | 11.2 | 11.3 | 10.7 | 10.2 |
| Abronhill South | 13.6 | 13.7 | 13.6 | 14.2 | 14.2 | 13.0 | 12.5 | 12.4 | 11.7 |
| Airdrie North | 20.8 | 21.6 | 20.9 | 20.7 | 21.2 | 20.3 | 19.2 | 18.1 | 17.9 |
| Allanton | 17.5 | 16.6 | 16.5 | 15.4 | 13.8 | 12.7 | 11.4 | 10.6 | 10.0 |
| Balloch East | 8.2 | 8.3 | 8.2 | 8.2 | 7.9 | 7.9 | 7.6 | 7.5 | 7.9 |
| Balloch West | 5.5 | 5.6 | 5.4 | 5.3 | 5.0 | 4.5 | 4.3 | 4.3 | 3.9 |
| Balmalloch | 12.2 | 12.4 | 12.1 | 11.7 | 11.7 | 11.6 | 11.0 | 10.7 | 10.2 |
| Bellshill Central | 17.4 | 17.6 | 17.6 | 17.5 | 16.2 | 14.5 | 13.3 | 13.1 | 11.7 |
| Bellshill South | 18.0 | 17.8 | 17.3 | 16.4 | 15.9 | 15.7 | 14.5 | 13.9 | 13.5 |
| Birkenshaw | 9.4 | 8.6 | 8.3 | 8.1 | 7.8 | 6.8 | 6.7 | 6.5 | 6.3 |
| Cairnhill | 10.5 | 10.0 | 9.6 | 9.6 | 9.5 | 9.1 | 8.8 | 8.4 | 7.6 |
| Caldercruix and Plains | 19.3 | 19.1 | 18.5 | 19.2 | 19.6 | 19.0 | 18.1 | 17.0 | 16.2 |
| Carfin North | 14.4 | 14.3 | 13.8 | 13.9 | 13.2 | 12.1 | 11.4 | 10.5 | 10.1 |
| Carfin, Cleekhimin and New Stevenston | 16.2 | 16.0 | 15.0 | 14.4 | 13.9 | 13.6 | 13.0 | 12.6 | 11.7 |
| Carrickstone | 5.5 | 5.2 | 4.8 | 4.5 | 4.2 | 3.9 | 3.6 | 3.5 | 3.8 |
| Chapelhall East | 11.2 | 9.9 | 8.0 | 7.7 | 7.8 | 7.2 | 6.6 | 6.8 | 6.7 |
| Chapelhall West | 20.4 | 19.1 | 18.6 | 18.5 | 18.1 | 18.3 | 17.3 | 16.5 | 15.9 |
| Chryston and Muirhead | 14.0 | 13.7 | 13.1 | 12.6 | 11.8 | 11.6 | 10.7 | 9.9 | 9.2 |

6. IB Claimants by Sex

Figure 5 shows the percentage of working age males/females in Scotland and North Lanarkshire claiming IB from 2000 to 2008.

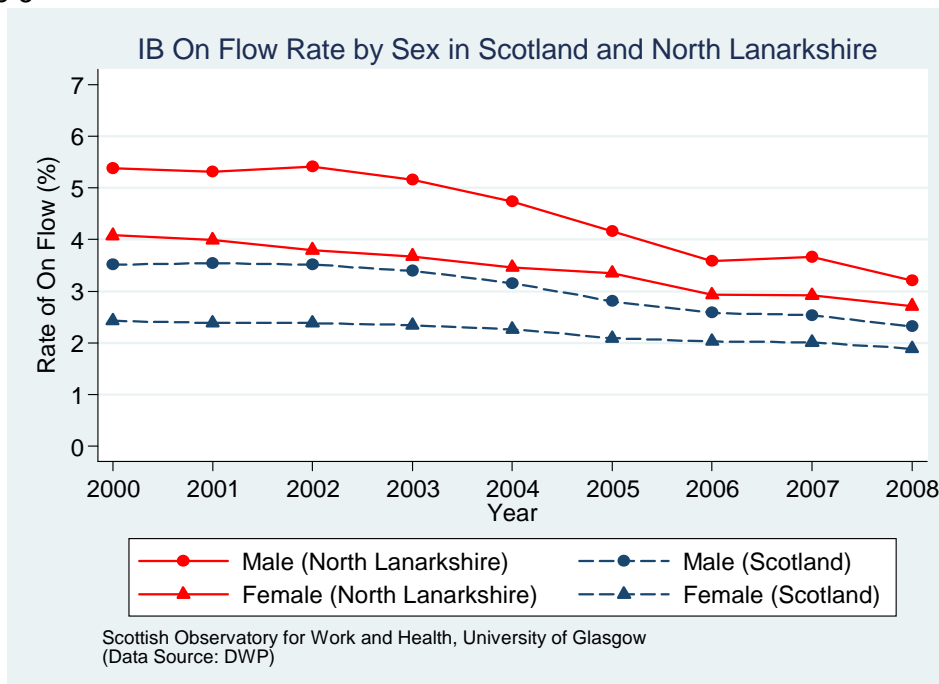

Figure 5

In 2000, in North Lanarkshire 16.6% of males were claiming IB and 14.7% of females. By 2008, 12.1% of males and 11.2% of females were now claiming IB.

Figure 6 shows the rate of on flow by sex in Scotland and North Lanarkshire. The rate of on flow is expressed as a percentage of the corresponding male/female WAP not on IB. This is the 'population at risk' of moving onto IB.

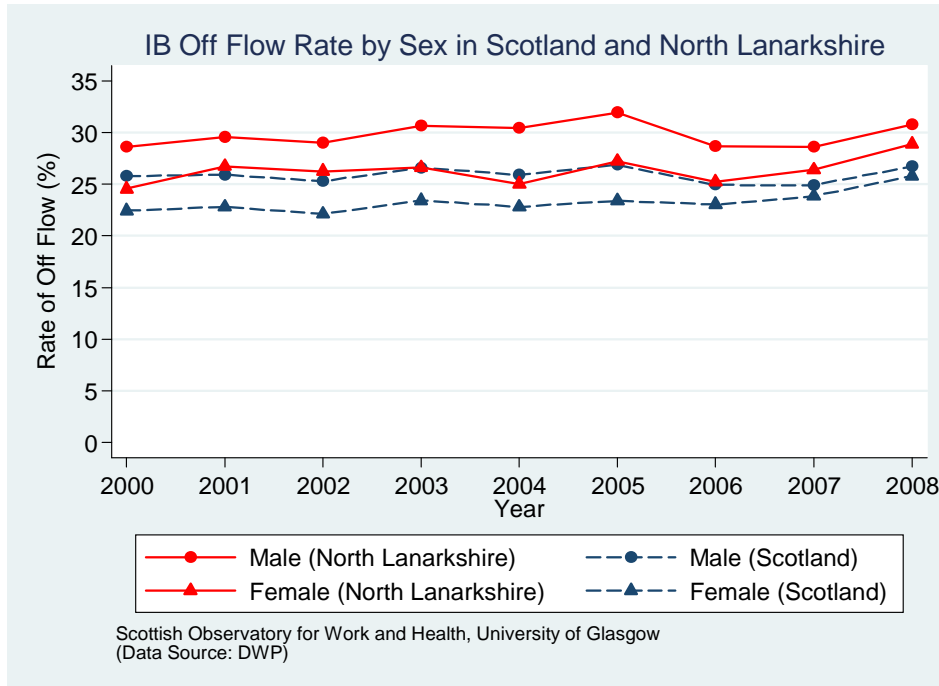

Figure 6

North Lanarkshire has higher on flow rates for males and females compared to Scotland. There have been larger decreases in the male on flow rate than female.

Figure 7 shows the rate of off flow by sex in Scotland and North Lanarkshire. The rate of off flow is expressed as a percentage of the corresponding male/females stock population. This is the 'population at risk' of moving off IB.

Figure 7

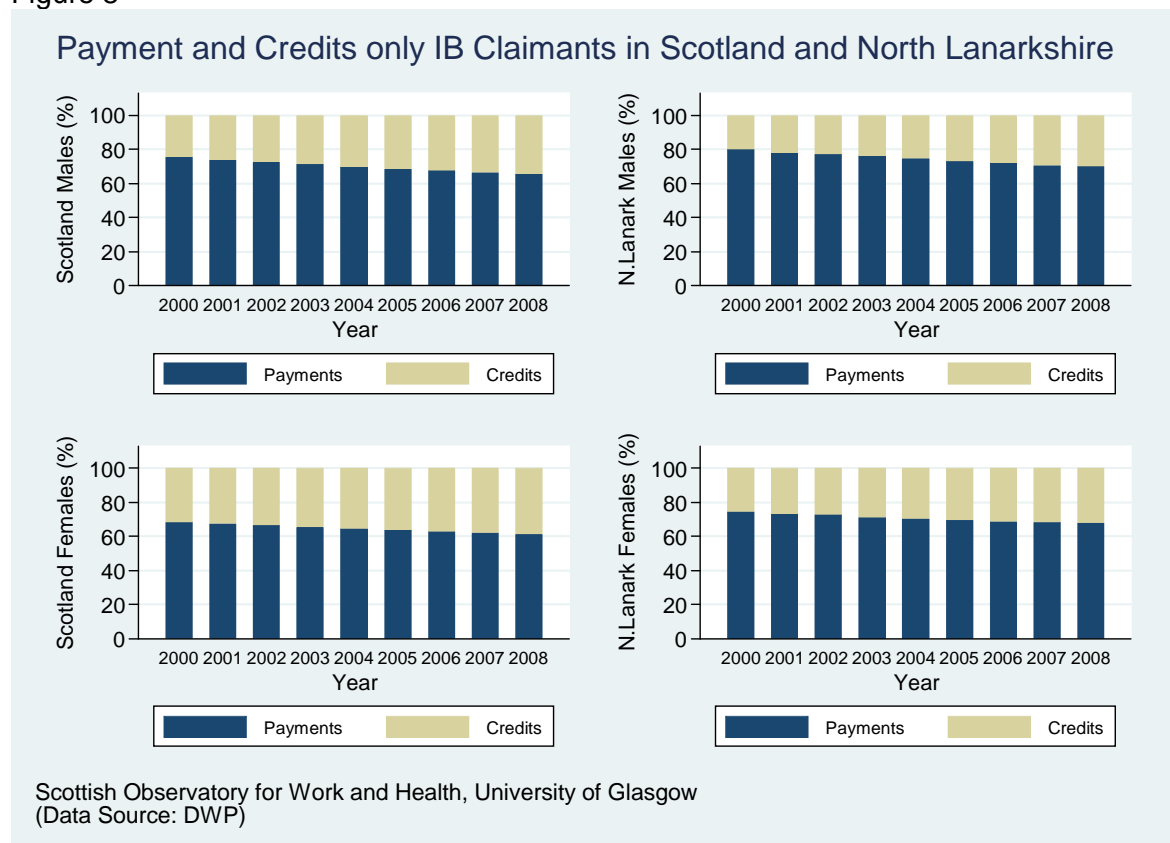

Off flow rates for both males and females are higher in North Lanarkshire compared to the respective Scotland rates.

There are two categories of IB claimants: 'payment' and 'credits only' claimants. Definitions are complex and the benefits system as a whole tries to ensure that individuals receive broadly equivalent amounts from the State – but the source may vary. For our purposes, the key difference is that 'payment' IB claimants have a good recent work history and receive IB payment. 'Credits only' claimants receive financial support from other sources but are 'credited' with pension contributions and gain access to other benefits like Income Support with a disability premium. These claimants have less good recent work histories.

Figure 8 shows the percentage of male and female 'payment' and 'credits only' claimants in North Lanarkshire and Scotland.

Figure 8

The proportion of 'payment' claimants is larger in North Lanarkshire compared to Scotland for both males and females. The proportion of male and female 'credits only' claimants have increased from 2000 to 2008. There are more female 'credits only' claimants than males although this proportion is still lower in North Lanarkshire than Scotland. The change over time in IB claimant types in North Lanarkshire displays the same general trend observed for Scotland. For example, in North Lanarkshire the number of male 'payment' claimants declined by 9.6% from 2000 to 2008 which is quantitatively similar to the 9.9% decline reported for Scotland. The number of female 'payment' claimants declined by 6.4% in North Lanarkshire compared to 6.8% in Scotland. The corresponding change for 'credits only' claimants is identical in magnitude but opposite in sign (e.g. 9.6% and 6.4% increase in male and female 'credits only' claimants in North Lanarkshire over the same period).

7. IB Claimants by Age

The IB population can be broken down into 11 age categories. Figures 9 & 10 show total IB claimants by age (expressed as percentage of the corresponding denominator age group) for Scotland and North Lanarkshire from 2000 to 2008.

Figure 9

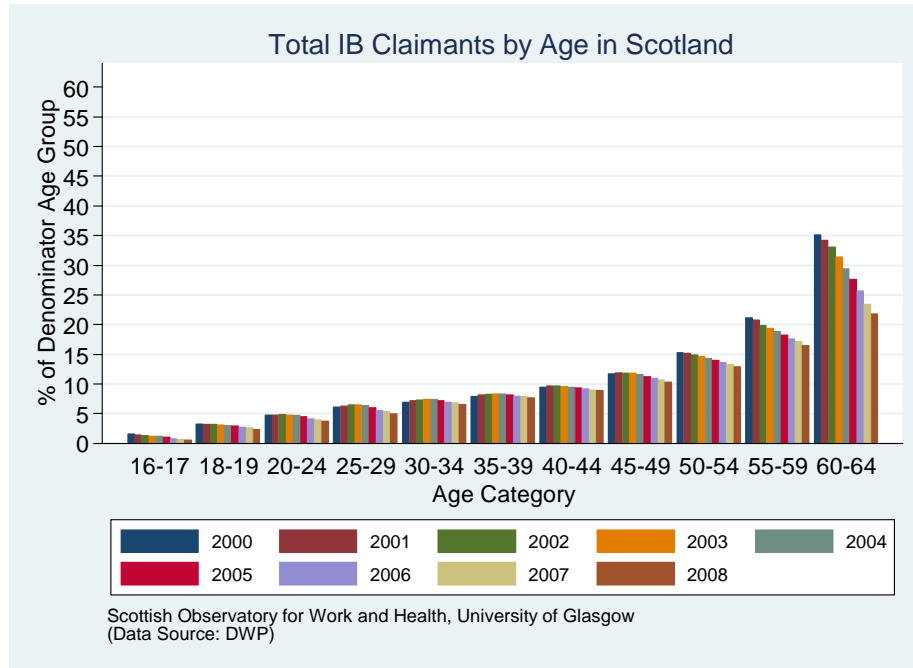

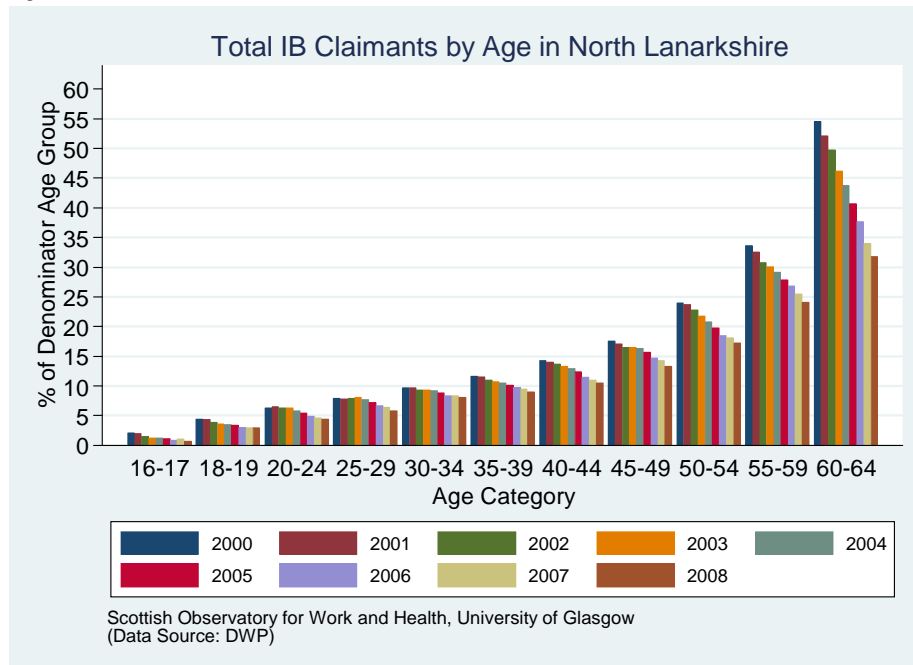

Figure 10

The proportion of each age group who are claimants rises with age, peaking in the 60-64 age group. However there are decreases in all age groups over time. North Lanarkshire has a higher proportion of the working age population on IB compared to Scotland in every age group. For example, in 2008 24.1% of 55-59 year olds in North Lanarkshire were claiming IB compared to 16.6% in Scotland.

Figures 11 & 12 show the rate of on flow by age in Scotland and North Lanarkshire. The rate of on flow is expressed as a percentage of the working age population in that age group not on IB. This is the 'population at risk' of moving onto IB.

Figure 11

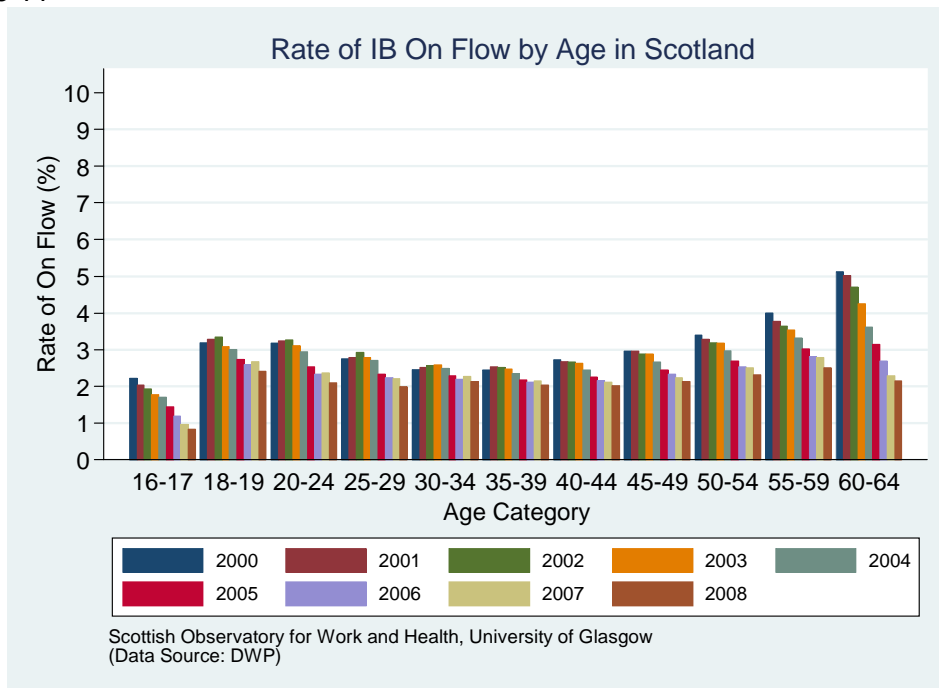

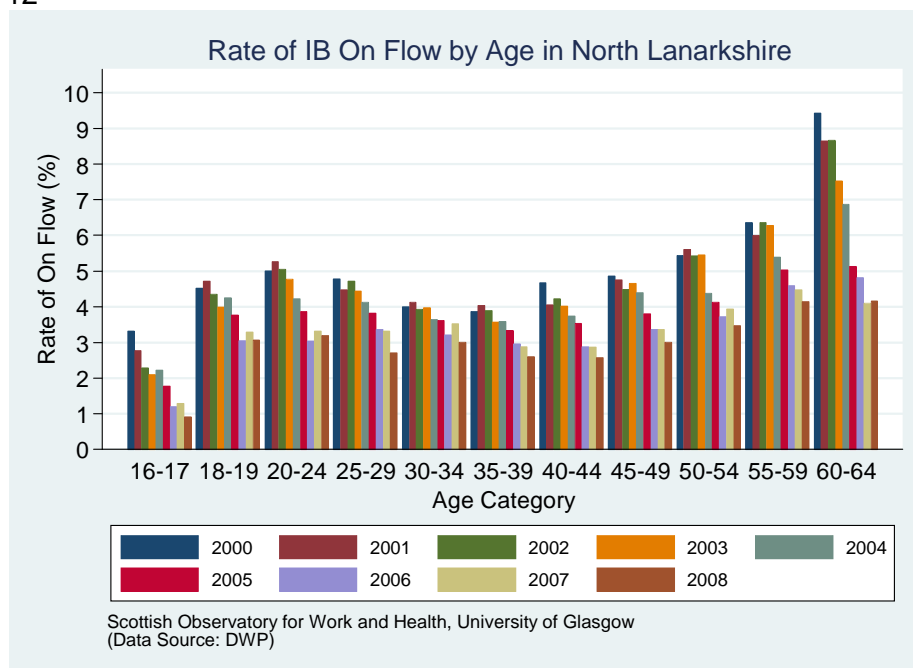

Figure 12

The on flow is more evenly distributed across the age categories. North Lanarkshire has higher on flow rates in all age categories compared to Scotland.

Figures 13 & 14 show the rate of off flow in Scotland and North Lanarkshire. The rate of off flow is expressed as a percentage of the total stock population in that age group. This is the 'population at risk' of moving off IB.

Figure 13

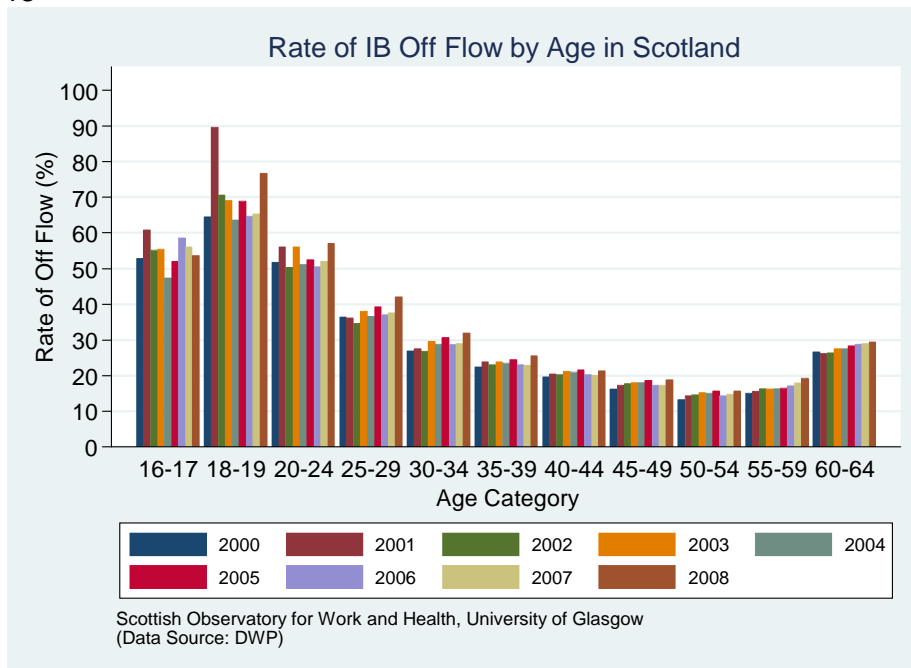

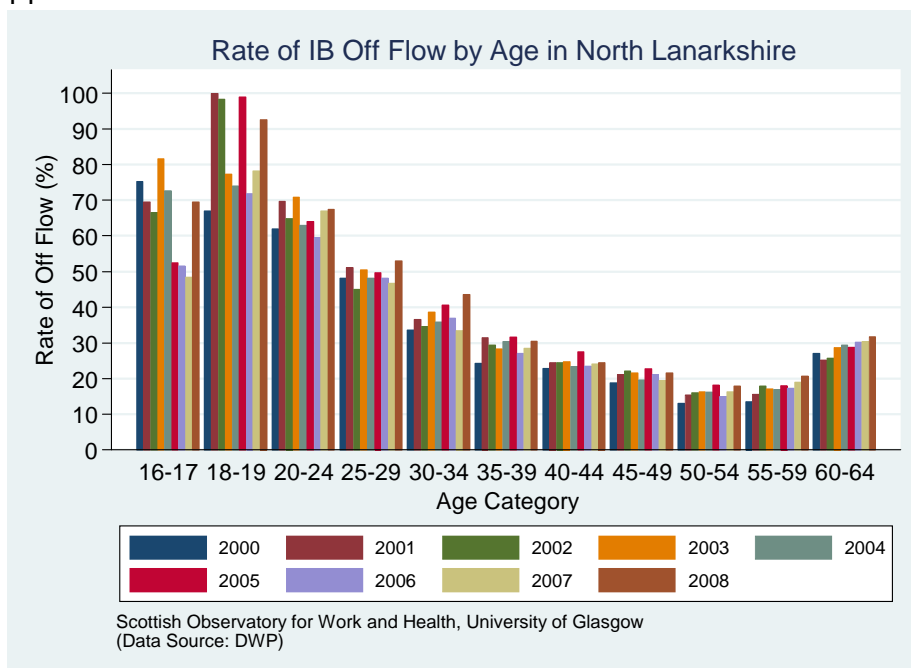

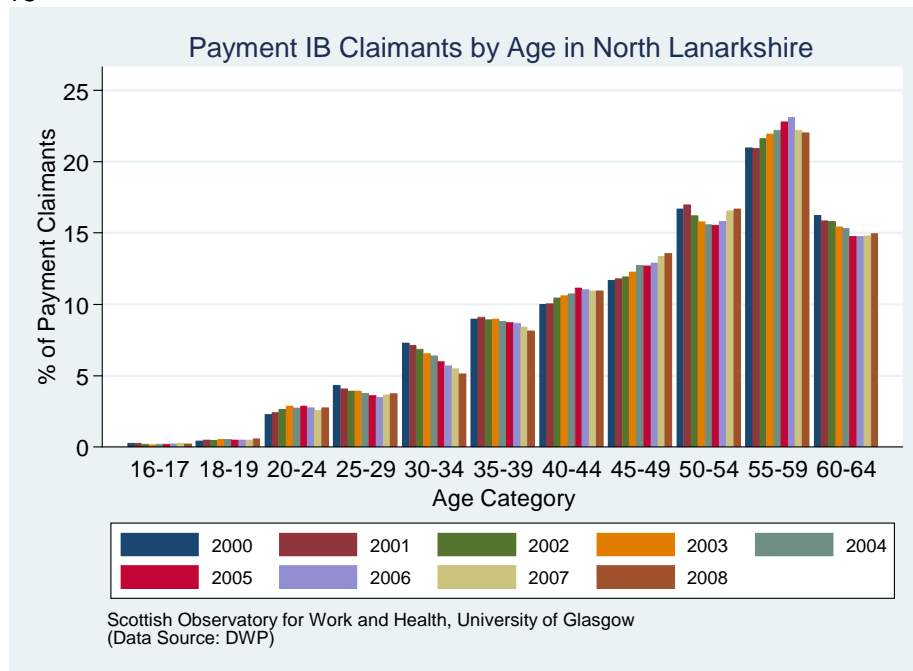

Figure 14

Off flow rates are higher for people under 30 and in particular the 16-17 and 18-19 age groups.

Figure 15 shows 'payments' claimants by age in North Lanarkshire. The number of 'payments' claimants in each age group are expressed as a percent of all payment claimants.

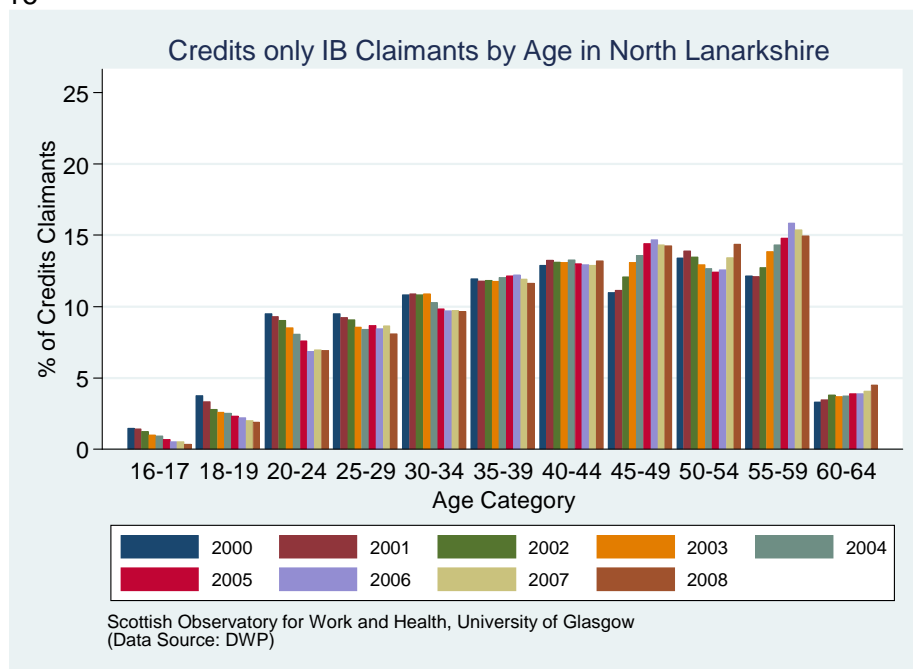

Figure 15

The percentage of 'payment' IB claimants increases with age with the majority of claimants aged over 40.

Figure 16 shows 'credits only' claimants by age in North Lanarkshire. The number of 'credits only' claimants in each age group are expressed as a percent of all 'credits only' claimants.

Figure 16

The age of 'credits only' claimants is more evenly distributed across age categories.

8. IB Claimants by Illness

Figures 17 & 18 show the number of IB claimants by illness category expressed as a percent of the total stock population in Scotland and North Lanarkshire.

Figure 17

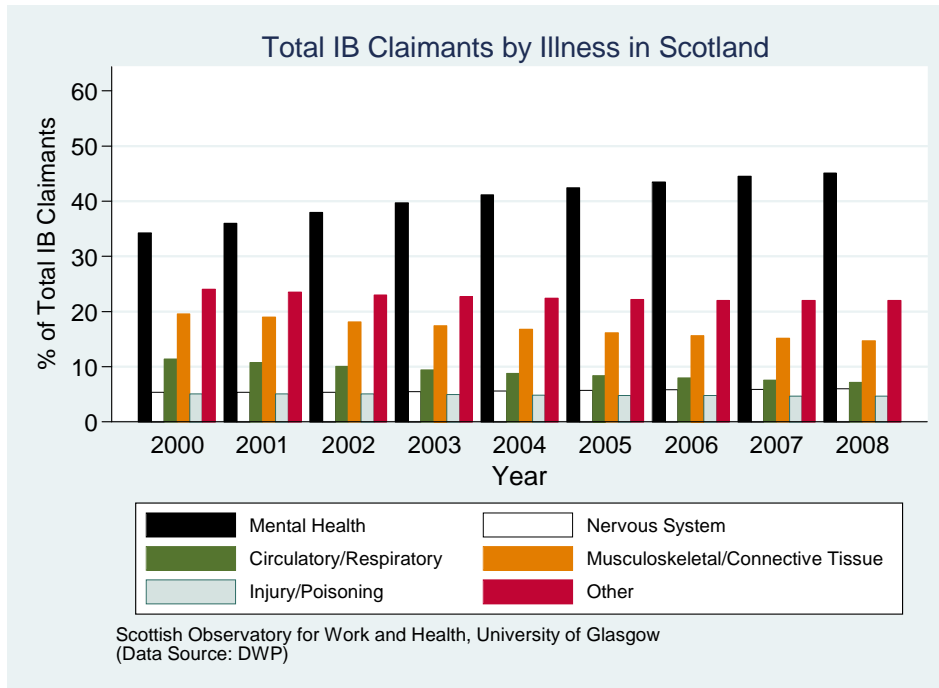

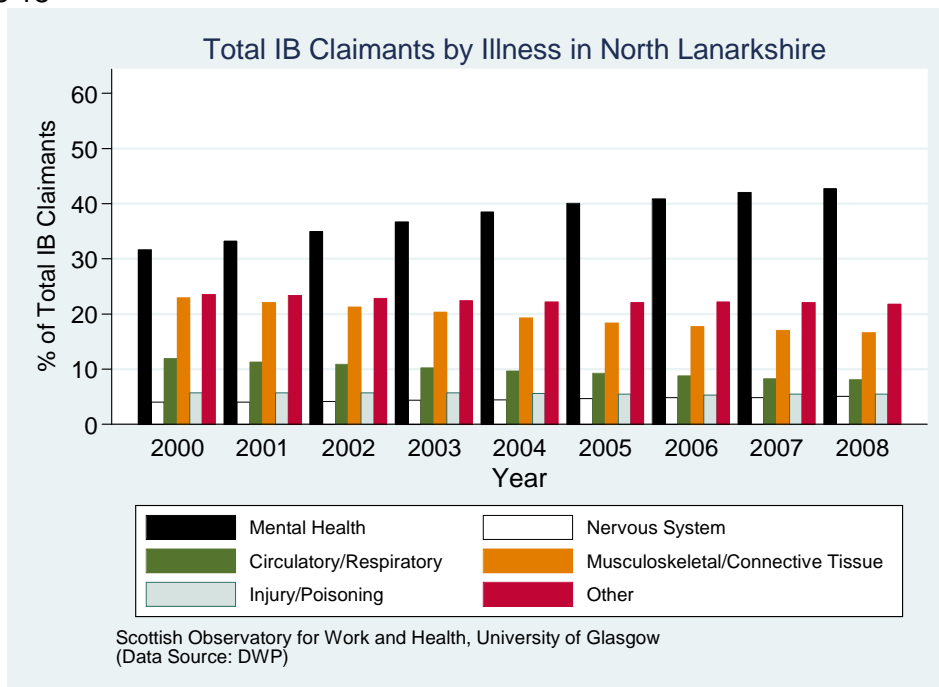

Figure 18

The main reason for claiming IB is 'mental and behavioural disorders' which has increased in both Scotland and North Lanarkshire from 2000 to 2008. In 2008 42.8% of all IB claimants were claiming because of a mental health problem in North Lanarkshire, compared with 45.2% in Scotland.

There has been a gradual increase in the number of IB claimants claiming because of a mental health problem and a decrease in the number claiming because of a musculoskeletal problem from 2000 to 2008. Figure 19 compares Scotland and North Lanarkshire.

Figure 19

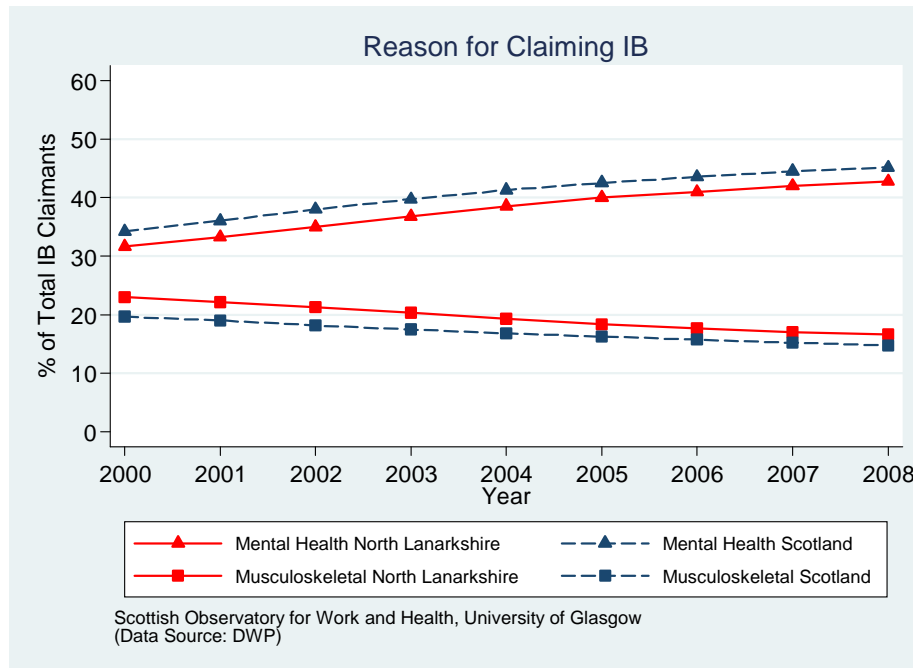

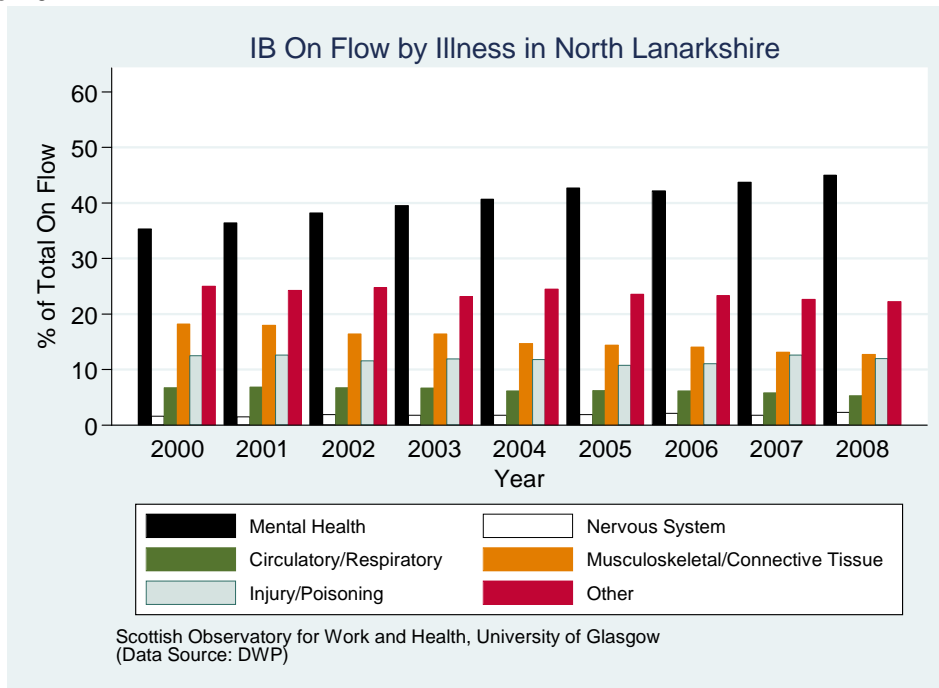

Table 6 shows mental health IB *rates* from 2000 to 2008 for North Lanarkshire and Scotland and are expressed as the number of mental health IB claimants as a percent of the working age population (WAP).

Table 6

| Year | Mental Health IB rate (% of WAP) | |
|------|----------------------------------|-------------------|
| | Scotland | North Lanarkshire |
| 2000 | 3.7 | 4.9 |
| 2001 | 3.9 | 5.1 |
| 2002 | 4.1 | 5.2 |
| 2003 | 4.2 | 5.4 |
| 2004 | 4.3 | 5.4 |
| 2005 | 4.3 | 5.4 |
| 2006 | 4.2 | 5.2 |
| 2007 | 4.2 | 5.2 |
| 2008 | 4.1 | 5.0 |

Figure 20 shows the on flow for each illness expressed as a percent of the total on flow in North Lanarkshire from 2000 to 2008.

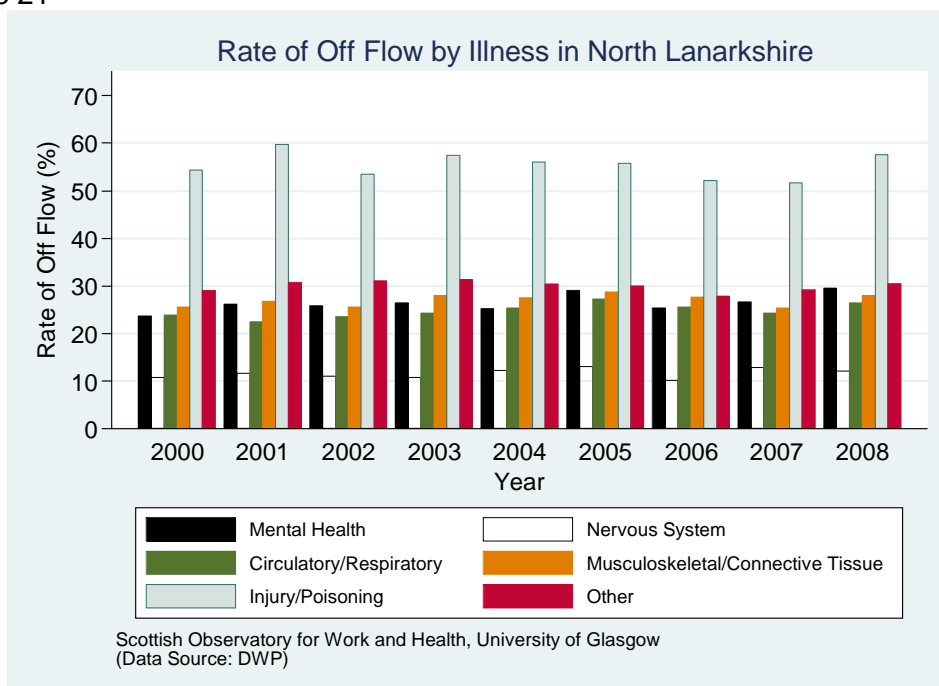

Figure 20

Those claiming because of mental health problems make up the largest category coming onto IB. There has been an increase in this category from 2000 to 2008 (43% of total in 2008).

Figure 21 shows the rate of off flow by the reason for claiming IB for North Lanarkshire from 2000 to 2008. The rate of off flow is expressed as a percentage of the total stock population in that illness category.

Figure 21

The highest off flow rates were for the injury group. However the numbers in the injury group are smaller than other groups. There were 760 people who left IB in 2008 having been on IB because of injury from a total off flow of 7,140. Therefore the injury group only made up 10.6% of the total off flow compared to 42.3% for the mental health group.

Table 7 shows the number of mental health IB claimants in the 73 intermediate zones from 2000 to 2008.

Table 7

| North Lanarkshire | Number of Mental Health IB claimants | | | | | | | | |
|---------------------------------------|--------------------------------------|------|------|------|------|------|------|------|------|

9. IB Claimants by length of time on IB

Figures 22 & 23 show the number of IB claimants by length of time on IB expressed as a percent of the total stock population in Scotland and North Lanarkshire.

Figure 22

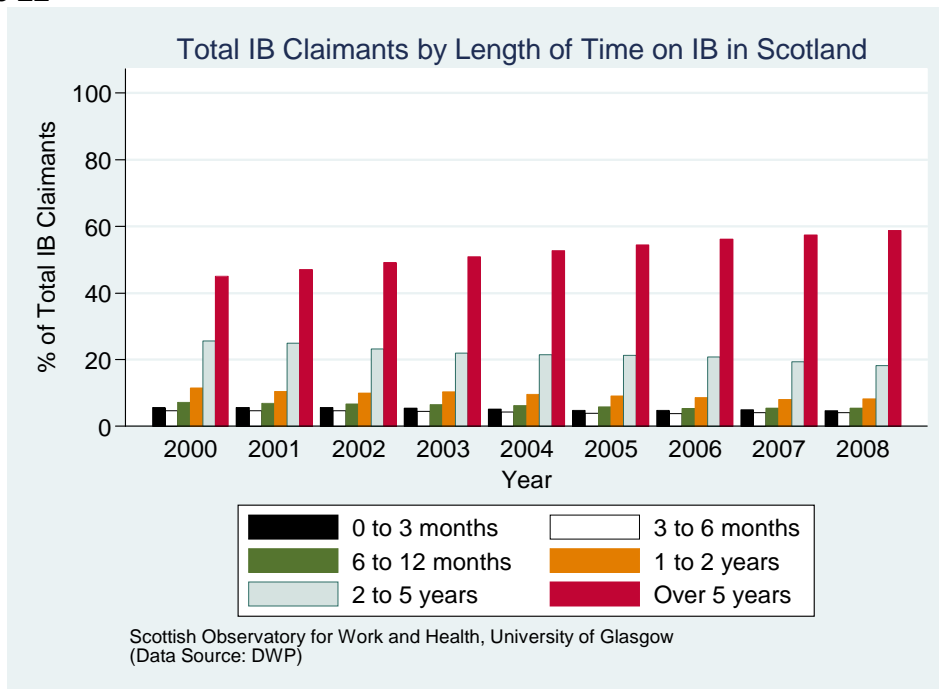

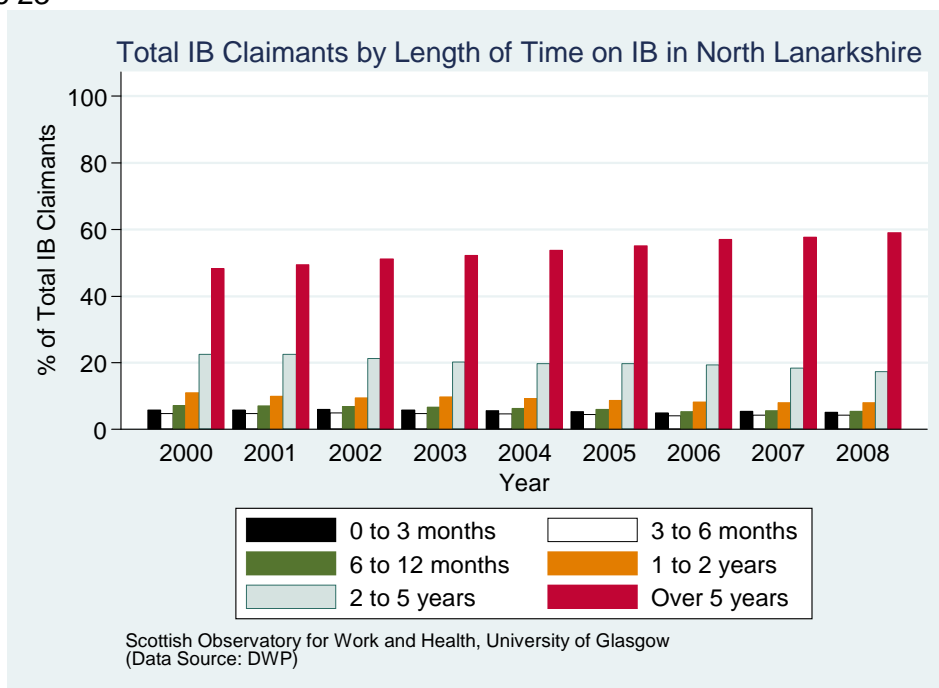

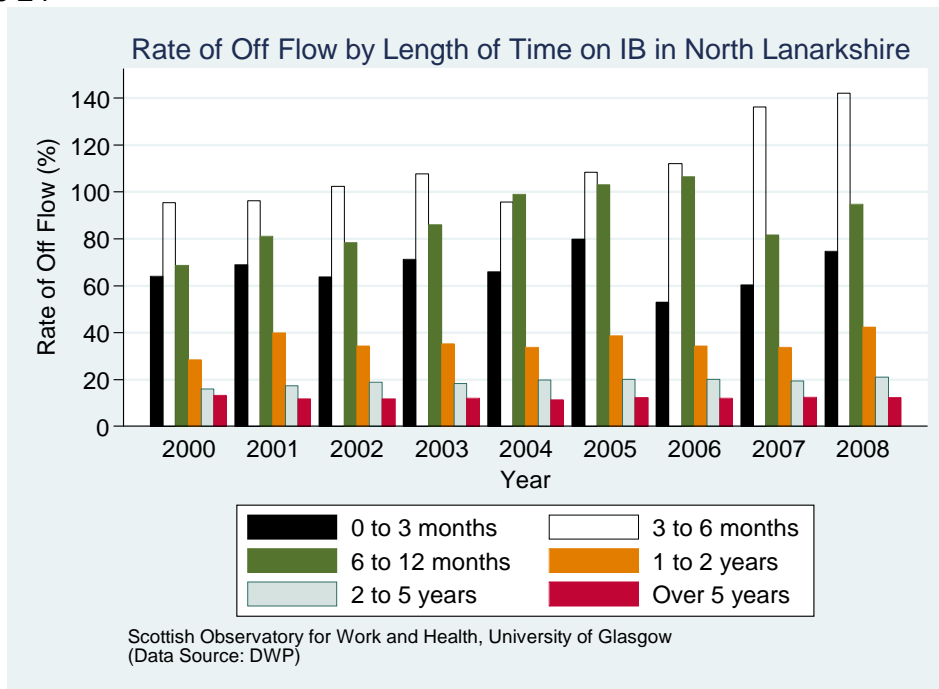

Figure 23

The majority of claimants have been claiming for more than two years, with 59.1% claiming for over 5 years in North Lanarkshire in 2008.

Figure 24 shows the rate of off flow by the length of time claiming IB for North Lanarkshire from 2000 to 2008. The rate of off flow is expressed as a percentage of the total stock population in that length of time on IB category.

Figure 24

Off flow rates decrease dramatically as length of time on IB increases.

10. Off flow destination data – restricted access

We have data from 2007 and 2008 which allows us to answer the following specific research questions. However at this stage the data has restricted access and can not be placed in the public domain.

1. What is the first destination of the off flow claimants?
2. How many IB claimants return to work after leaving IB?
3. What characteristics delineate those who enter work after leaving IB?
4. How many people remain in work 3 months, 6 months and 12 months after leaving IB?
