About this document:

This Excel workbook details the findings of the survey undertaken in October 2011 to identify the use of technology by incoming first year students and their expectations of using technology in their university studies.

The Question List shows the questions asked in 2011 and also provides a comparison with those asked in 2009. The numbers in brackets in the responses indicate the numbered response in the Raw Data sheet.

The Digital Natives sheet provides a breakdown of the data by College.

The Raw Data sheet contains the original data. Some rounding has been done to ensure that individuals cannot be identified.
