Promoting further and higher education

This is a Partnership Project between the University of Glasgow (the lead partner), the Glasgow Caledonian University and the University of St Andrews, funded through a Strategic Change Grant from the Scottish Funding Council.

## Aiming University Learning @ Work

### What is it?

- It is an innovative Project, designed to tackle the issue of 'how-to' enhance work related learning in the curriculum at university level.

### Who is involved?

- Three universities are involved, the University of Glasgow as the lead partner, the Glasgow Caledonian University and the University of St Andrews.
- The Project is funded through a Strategic Change Grant from the Scottish Funding Council.

### How long will the Project last?

- The Project is funded for three years, although it is anticipated that the benefits will be sustained after this period.
- There are three phases which will incorporate three strands of activity:
  - Research,
  - Exploring and developing work related learning opportunities
  - Support for Embedding work related learning.

### Who is the Project aimed at?

- Initially it is aimed at undergraduate students on non-vocational courses in Biosciences, Business & Management, History, Mathematics, Physics and Psychology.

### Why?

- Recently, there has been an increasing emphasis on, and recognition of, the need to enhance students' long-term employability.
- This is particularly true of those subject areas, which do not traditionally have a 'history' of work experience or work related learning for students.
- To create a strategic 'shift' by creating sustainable change within Higher Education Institutions.

### How will this happen?

- The Project will research the barriers and opportunities in embedding work related learning in curricula.
- The Project will pilot models for sustainable work related learning across a range of disciplines.
- The Project will explore the feasibility of collaborative relationships, e.g. with employers, in the enhancement of work related learning.
