

Inspection Regimes for Managers Training

Product summary

Background

A key part of the risk management process is controlling risks and monitoring the effectiveness of those controls. It cannot be emphasised strongly enough that one of the main weapons in the application of risk management techniques is the inspection regime.

It enables a public body to identify potential hazards before they cause damage or injury and also enables a defence that, even if loss or injury has occurred, the organisation has undertaken all that could be reasonably expected of it.

With many organisations, it is often found that two problems can reoccur:

- An inspection has been completed but it cannot be proved to the satisfaction of the judicial system
- An inspection was undertaken but the object inspected was not defective and maintenance was not required.

This course is designed to deliver to managers a more in-depth knowledge of the processes involved in establishing a provable inspection regime for the assets for which they have responsibility.

Summary

This facilitated interactive discussion between the consultant and delegates involves practical and theoretical content and examples. On completion of the course, delegates will be able to take their practical experience back to the workplace and use it within their own areas of responsibility.

Training methods include the use of discussion techniques and exercises to explain the key tasks of drawing up an inspection regime. The training helps all managers and supervisors responsible for managing assets, premises or land. It will help them develop a consistent approach to establishing corporate inspection regimes that will also help in any claims defence.

Features

- The course is based around a half-day training session for up to 12 delegates with either one half-day session per day or two half-day sessions on the same day at a reduced fee
- The product stands alone but can also be linked to other risk management departmental training products
- It is strongly recommended that delegates should have undertaken the Introduction to Risk Management training as a precursor to this course
- An additional separate course is available for operational front line staff
- Each delegate will be provided with a CD-ROM containing the course slides and notes.

The training covers:

- An introduction to risk management
- How inspection regimes fit in to the key areas of risk evaluation and risk control
- A review of current legal issues
- A discussion of how the use of inspection records affect judicial decisions
- A consideration of the key areas and parameters in the overall process that affect:
 - Frequency of inspection
 - Items for inspection
 - Degree of deficiency
 - Nature of response
 - Monitoring.

Duration

Half-day.

Provider

A fully trained and experienced Zurich Risk Management Consultant.

Format

Workshop and training course.

Benefits

- Raises awareness of risk management as a concept
- Raises awareness of the role an inspection regime plays within the risk management process
- Provides a working knowledge of the legal processes that give rise to statutory liabilities
- Helps delegates gain an understanding of the key elements of an inspection regime.

Where this would be useful

Any organisation with assets to manage needs to consider the risk of liability claims arising from the mismanagement of those assets. This training allows managers to understand the need for, and implement, a successful inspection regime.

Who is it aimed at?

All departmental managers.

Case studies/quotes

An organisation in the South East was concerned at the number of personal injury claims being made against it and found there were no safety inspection regimes in place. After attending this course, the various departmental managers were able to introduce the system of safety inspection regimes most appropriate to their area of work and reduce the number of claims being made.
