Hopefully the above will prove helpful.

Biographies

Professor Christopher Gillberg, Professor of Child and Adolescent Psychiatry at the University of Gothenburg, Sweden, since the mid-1980s. He heads the Gillberg Neuropsychiatry Centre. He is also a Chief Physician at the Sahlgrenska University Hospital and one of the world's most experienced, clinically active, child- and adolescent psychiatrists, with over 40 years of extensive clinical work in treatment of patients and families with complex psychiatric/neurodevelopmental problems. In 1993 he was Fulbright Visiting Professor at New York University Medical School. He is also Visiting or Honorary Professor at the Universities of London, University College London (Institute of Child Health), University of Glasgow, University of Edinburgh, the Pasteur Institute, and Kochi University, Japan (where he is involved with the Japan Environment and Children Study/JECS). In the past he has been a Visiting Professor at Odense, Bergen (where he started and was PI on the Bergen Child Study), and San Francisco. Christopher Gillberg has published more than 650 peer-reviewed scientific papers (602 of which are currently on the NIH PubMed website) on autism, Asperger syndrome, ADHD, Tourette syndrome, intellectual disability, epilepsy, behavioural phenotype syndromes, depression, reactive attachment disorder, anorexia nervosa, and other areas relevant for children's and adolescents' mental and neurological health. His research ranges from genetics and basic neuroscience through epidemiology and clinical phenomenology to treatments/interventions and outcome. He has written 33 books, which have been published in more than a dozen languages, several of which are standard textbooks in the field of Child and Adolescent Psychiatry and Autism. He is an honorary member of the Swedish National Autism Society and ADHD Society ("Attention"). He is a member of the Norwegian Academy of Sciences. He is the recipient of many national and international awards including the Fernström Prize for young researchers (1991), the Royal Medal of the Seraphim Order from the Swedish King (2009), and the Söderberg Prize in Medicine (2012). He supervises and has supervised more than 45 PhD-students at the GNC and at other universities across the world. Christopher Gillberg is the most productive autism researcher in the world, and is on Thomson Reuter's 2014 list of the world's most influential researchers (all fields) and received INSAR Lifetime Achievement Award 2016.

Professor Helen Minnis, Professor of Child and Adolescent Psychiatry at the University of Glasgow. She spent time working as an Orphanage Doctor in Guatemala in the early 1990s prior to training in Psychiatry, and this stimulated an interest in the effects of early maltreatment on children's development. Her research focus has been on Reactive Attachment Disorder (RAD) and Disinhibited Social Engagement Disorder (DSED): clinical aspects, assessment tools and behavioural genetics. She is now conducting intervention research for maltreated children including a NIHR funded randomised controlled trial of an infant mental health service for young children in foster care.

Professor Andrew Gumley, Chartered Clinical Psychologist registered with the Health and Care Professions Council UK, and a Professor of Psychological Therapy. He is also Guest Professor at the University of Copenhagen. He is a leading international researcher investigating psychological interventions for people with psychosis. Andrew has also undertaken extensive research into the importance of fear of recurrence as a block to recovery in people with psychosis, and the importance of attachment as a basis for resilience and recovery. This research has informed the design of complex interventions and the development of systems based interventions to enhance engagement and recovery. His research is funded by the National Institute of Health Research Health Technology Assessment (NIHRHTA), National Health Medical Research Council – Australia (NHMRC) Chief Scientist's Office (CSO) Scottish Government, Medical Research Council (MRC), the Danish Institute for Humanities Research, and NHS Greater Glasgow & Clyde.

Dr Ruchika Gajwani is a Clinical Psychology Research Fellow within the Adverse Childhood Experiences Centre at the University of Glasgow, and an honorary clinical psychologist in NHS GGC. On completion of her academic and clinical training at the University of Birmingham and Early Intervention for Psychosis, she joined the department of child and adolescent psychiatry at the University of Glasgow in 2014. Dr Gajwani is involved in developing research on youth mental health, with a particular interest in the emerging psychosis and borderline personality disorder. As an early career clinical researcher, her academic initiatives, funded by the Medical Research Council (MRC) and NHS GCC include the understanding of developmental risk factors for severe and enduring mental health

difficulties, attachment theory and maltreatment, affective dysregulation and suicide prevention, youth mental health risk and resilience.

Dr Michael Smith (MD, FRCPsych) is Associate Medical Director for Mental Health in NHS Greater Glasgow and Clyde, and a Visiting Professor at the Centre for Excellence for Looked After Children in Scotland (CELCIS) at the University of Strathclyde. He trained as a General Practitioner in Glasgow, and then as a psychiatrist in the West of Scotland and Melbourne, Australia. He was a founding member of the “see me” campaign against stigma in Scotland (www.seemescotland.org) and set up the Doing Well depression programme in Renfrewshire (www.doingwell.org.uk). He worked with the Scottish Government’s Mental Health Collaborative from 2008-11 to rationalise the use of antidepressants in Scotland. His research

interests are in depression, public mental health, and especially the influence of attachment and adverse childhood experiences.
