What is it about?

An evening course centered around providing students with an interdisciplinary introduction to climate change, using approaches from both the social sciences, and the natural sciences.

PART I: Historical and Sociological causes
Part II: Nature and Human consequences
Part III: Potential solutions and action plans: small and big scale policies and renewable energies

Aims for Graduates:

- A solid understanding of the history of the climate crisis
 - What climate change means to society as we currently understand it
 - What can be done to adapt to and mitigate its effects
- Will provide students with a well-informed, interdisciplinary perspective on the climate crisis, and the mindset to act.**
