Programme Structure

MEng and BEng programmes follow the same curriculum up to the end of third year. Students must attain a GPA of at least 14.0, at the end of year 3, in order to progress onto the MEng. Students who fail to attain this level may only be permitted to study for the BEng.

Please note: The curriculum as outlined may be subject to change prior to the start of the programme. Full course descriptors can be found at: [www.gla.ac.uk/coursecatalogue](http://www.gla.ac.uk/coursecatalogue)

Year 1
- Analogue Electronics 1
- Engineering Skills 1
- Environmental Engineering 1
- Materials 1
- Civil Engineering 1
- Dynamics 1
- Engineering Mathematics 1
- Statics 1
- Thermodynamics 1

Year 2
- Soil Mechanics 2
- Structural Design 2
- Structural Design Project 2
- Environmental Processes 2
- Civil Engineering Skills 2
- Geology for Civil Engineers 2
- Mechanics of Structures 2A
- Mechanics of Structures 2B
- Fluid Mechanics 2
- Engineering Mathematics 2

Year 3
- Structural Design 3
- Structural Mechanics 3
- Geotechnical Engineering 3
- Soil Mechanics 3
- Structural Design Project 3
- Civil Design Projects 3
- Environmental Process Engineering 3
- Construction Management 3
- Engineering Hydraulics 3
- Highway Engineering 3
- Mathematics E2N

Year 4 MEng
- Finite Element Analysis 4
- Geotechnical Engineering 4
- Integrated System Design Project 4
- Structural Analysis 4
- Structural Design 4
- Geotechnical Design Project 4
- Hydraulics & Hydrology 4

Options
- Ground Engineering 4
- Industrial Aerodynamics 4
- Environmental Biotechnology 4
- Renewable Energy 4
- Transportation Systems Engineering 4
- Managing River Catchments
- Coastal Environments and Management
- Coastal Processes

BEng Option Only
- Finite Element Analysis 4
- Geotechnical Engineering 4
- Structural Analysis 4
- Structural Design 4
- Hydraulics & Hydrology 4

Year 4 BEng
- Civil Design Project 4
- Individual Project 4

Year 5
- Structural Design Project 5
- Individual Project C5

Options
- Structural Design 4
- Composite Airframe Structures
- Introduction to Wind Engineering
- Structural Concrete C5
- Computational Modelling of Nonlinear Problems 5
- Advanced Structural Analysis and Dynamics
- Reclamation of Contaminated Land
- Energy from Waste M
- Advanced Soil Mechanics 5
- Transport Network Optimisation 5
- Managing River Catchments
- Principles of GIS
Timetable
Sample timetables show an average schedule. You will have lectures every day probably, between 2 and 4 hours per day. In addition you will have laboratories or tutorials which allow you to develop what you have learnt in the lectures. The number of laboratory sessions or tutorials you have over the term will depend on the subject, but in the first year there will typically be 1-2 laboratories and 2-3 tutorials per week and these will all start in the third week of term.

A definitive copy of your timetable will be available on MyCampus, once you have registered. You should check this regularly as updates will be made.

www.gla.ac.uk/students/myglasgow/

Please note that you are expected to do several hours of independent study per week, for each subject, throughout the term. In fact studying engineering is like a full time job, you’ll require good time management to balance study and other commitments.

Most teaching is done in 50 minute lectures and each lecturer will present in their own style. Most will give handouts or make notes available online but you will be expected to take notes during the lecture.

Online you will find extracts from first year lectures – they are only a tiny part of a large course and can only give you an approximate idea of content and level. They have been taken from part way through the course so some concepts may be used which were explained earlier in the course, and you’re not expected to understand it before you arrive.

Wider reading
Due to the nature of the programme we don’t provide a specific reading list, below is a suggestion of wider reading:

Mathematics Revision

Here are a few exercises to help you to revise your mathematics before you come to university. All of the techniques should have been covered in Higher Mathematics but the questions are dressed up in the language of engineering, which may make them a lot more challenging! However, they will provide a good introduction to studying at university. The examples are from electronics because you may have encountered some of the material in Physics at school. You will see plenty of applications to your discipline when you arrive here.

Please don’t get the idea that the curriculum is dominated by mathematics: it is definitely engineering. However, professional engineers use mathematics as a tool to help them solve problems, which means that you must be able to do basic calculations quickly and reliably – almost automatically. You won’t be able to concentrate on the engineering if it takes you half an hour to work out a simple calculation! The control’s batteries are rated at 100 mAh. This means that the product of the current in mA and lifetime in hours is 100. For example, they will provide 100 mA for 1 hour or 0.1 mA for 1000 hours. How long will they last in the remote control? [About 3 months]

1. Figure 1(a) shows a widely used circuit called a potential divider formed by two resistors. The input and output voltages are given in terms of the resistances by

\[ V_{\text{out}} = \frac{R_2}{R_1 + R_2} V_{\text{in}} \]

Use this to find the unknown quantities in figures 1(b)–(e). [0.5 V, 500 Ω, 12 V, 16 kΩ]

2. A remote control draws 10 mA while it is being used and 10 μA when it is idle. (Make sure that you know the powers of 10 for the prefixes in mA and μA.) How is the average current drawn, assuming that it is used for 5 minutes per day? Which is more significant, the current drawn when it is operating or idle? [45 μA]

3. Figure 2 shows two classic circuits based on an operational amplifier – the component shown by the triangular symbol. They act as (a) inverting and (b) non-inverting amplifiers. You may have come across these circuits before but don’t worry if you haven’t. However, they will provide a good introduction to studying at university. The examples are from electronics because you may have encountered some of the material in Higher Physics at school. You will see plenty of applications to your discipline when you arrive here.

Student Advising System in the School of Engineering

The purpose of this short note is to make you aware of the Undergraduate Advising System we have in the School which is available to support you in your studies. As soon as you register with us you will be allocated an Adviser of Studies. You can easily find out who this is by logging in to your MyCampus account.

I should make it clear that your adviser is not a tutor – he/she will not be able to help you with problems relating to your course material (you should contact the course lecturer for this). Your adviser of studies is there to help you with any other problems you might experience which affects your ability to study. They will also help you with issues relating to academic progress, curriculum choices and career matters.

During the first two weeks of the semester you will be contacted by your adviser and invited to meet him/her. This is simply to give you a chance to meet your adviser for the first time, and should only take a few minutes – please attend this meeting.

Our intention is that you should keep the same adviser throughout your degree study and he/she will be able to provide you with reference letters and recommendations when you come to apply for a placement, internship or a permanent job after graduation.

During the semester if you should have problems, medical or personal, for example, you can ask for an appointment to see your adviser (usually by e-mail). If your adviser can’t help you directly, the University has many central student support services (counselling, financial advice, chaplaincy etc) and your adviser will point you to the correct service to help you. Anything you tell your adviser will be held in the strictest confidence.

If you miss any classes (say due to illness) please report them using the Student Absence system on MyCampus. If during the exam period you are ill and this causes you to miss an exam or you feel your performance has been affected, please use the Good Cause reporting system on MyCampus.

Advisers are also busy academics and may have commitments with teaching and research or may indeed be off-campus for periods of time. If you cannot contact your adviser of studies please contact the Teaching Office (see contact details opposite) who will direct you to the Senior Adviser for your discipline.

ENGINEERING SOCIETIES

At the school of Engineering, we strongly encourage student-led activity wherever possible. This past year alone we have seen the launch of three new student-led initiatives. Below is a list of our current engineering student associations. Don’t be discouraged if you feel that there is a gap – it’s an opportunity to start your own…

- Design, Build, Fly
- EWB (Engineers Without Borders)
- FEMEng (Female Engineering Society)
- Formula Student (Racing Car Construction)
- GUBMES (Glasgow University Biomedical Engineering Society)
- GUES (Glasgow University Engineering Society)
- GUieee (IEEE Student Branch)
- GURobotics
- iGEM (Synthetic Biology)
- JetX (Jet Engine Enthusiasts)

For more information visit:
www.gla.ac.uk/engsoc

Design Build Fly

The University of Glasgow’s Design Build Fly team aims to take part in the cutting edge competition held by American Institute of Aeronautics and Astronautics which challenges engineering students from across the globe to design remote controlled aircraft, build, then fly them at the contest sites in the USA.

Last year, the team enjoyed success in Arizona coming 19th out of 100. The team are currently preparing to compete in Kansas during the spring.

For more information or details about how to get involved contact:
