Social media and online ethics

- Public – v – private
- Ownership and legal requirements (ToS, EULAs, etc.) – use of APIs
- Observational
- User’s views
Swatman (2012) on privacy:

- Is the space being researched seen as private by its users?
  - Are they aware they are being observed?
- Is everything what it seems?
  - Are Fred X and Mary Y really who they claim to be? Age? Bots?
- How do researchers ensure their participants really are anonymous?
  - IP addresses are (usually) traceable; Tweets may contain identifiers...
  - See also Internet Specific Ethical Questions section in AOIR (2012)

Observational studies

Both BPS (2013) and BERA Guidelines (2011) appear to support obtaining consent in observational studies conducted online. BERA guidelines state:

> Social networking and other on-line activities, including their video-based environments, present challenges for consideration of consent issues and the participants must be clearly informed that their participation and interactions are being monitored and analysed for research. (p. 5)

And BPS guidelines go further, placing the burden of proof on the researcher to demonstrate that the value of covert observation or collection of user-generated posts without consent:

> “[t]here must be a clear and convincing argument for the use of deception online, which is only condoned if the research question can be seen to justify it” (p.7).

Salmons (2014) p17
Users

• just 38% of the public are aware their social media posts are potentially being analysed for research projects.

• a majority (60%) say they don’t think social media companies should be sharing their data with third parties for research purposes. (IPSOS Mori, 2015)

• **Representivity** – offline – online? (IPSO Mori/Demos)
Early on in the research we quickly realised that many of the learned society ethical resources were of little guidance, given their focus on non-digital data. Where addendums on using Internet data were written, they had little to say about social media. Papers were being published in reputable journals with tweets quoted verbatim, with unacceptable and ineffective methods of anonymisation, and without informed consent from users\textsuperscript{1}. ........ Research on users’ views of the repurposing of their social media data consistently shows that the majority wish to be asked for informed consent if their content is to be published outside of the platform which it was intended for\textsuperscript{2}.
