The first two years of the programme are based at our Garscube campus. Our Veterinary Medicine students are based at our Garscube campus and February each year.

courses. During this initial phase, you will acquire fundamental knowledge and develop the skills and attitudes required to work in the clinical environment and take a greater impact on the animals we care for. In the first two years of the programme in year 5.

The NAVLE is offered twice a year - in November/December and in April. All final year students are given support with preparing for the NAVLE examination.

Our intercalated degree programme is available to students following their second or third study abroad as an integral part of the BVMS programme in year 5.

The NAVLE examination is offered twice a year - in November/December and in April. All final year students are given support with preparing for the NAVLE examination. For further information on data protection refer to the University's privacy statement.

Career prospects
As a graduate of Veterinary Medicine at University of Glasgow, you will be eligible to register as a member of Royal College of Veterinary Surgeons (MRCVS). Along with the University's approval by the Council of Europe, we also have a single degree programme (both at undergraduate and postgraduate levels) in Veterinary Medicine, and the University is one of six Vet schools in the United Kingdom to offer an intercalated degree programme.

The intercalated degree programme is another opportunity for students in their final year of study to gain experience in a specific discipline, e.g. animal welfare, or in a particular animal species. Opportunities are available in a variety of settings, including hospitals, research institutions, and government agencies. Students may be required to complete a research project or a clinical placement as part of the programme.

If you are considering a career in veterinary medicine, we encourage you to apply to our programme for undergraduate study in Veterinary Medicine. Our programme provides an excellent foundation for students who wish to pursue careers as veterinary surgeons, veterinary nurses, or in other related fields such as animal welfare, research, or education.

We accept applications from students from a wide range of backgrounds and academic experiences. Our programme aims to provide a strong foundation in veterinary science and to prepare students for further study or professional practice. We welcome applications from students with an interest in animals and a desire to pursue a career in veterinary medicine.

If you have any questions or would like to know more about our programme, please feel free to contact us.

If you are interested in applying to our programme, please visit the University's website for more information on the application process and deadlines.
