2. Academic Session:

2018-19

3. SCQF Level (see Scottish Credit and Qualifications Framework Levels):

10

4. Credits:

480

5. Entrance Requirements:

Please refer to the current undergraduate prospectus at: http://www.gla.ac.uk/undergraduate/

6. ATAS Certificate Requirement (see Academic Technology Approval Scheme):

ATAS Certificate not required

7. Attendance Type:

Full Time

8. Programme Aims:

Marine & Freshwater Biology is the scientific study of all aspects of aquatic life, i.e. life in freshwater, estuaries and the seas. Marine & Freshwater Biology is a rapidly-advancing subject with considerable relevance to the way we manage the environment. The Honours Programme provides a broadly-based treatment of the principles and problems of Marine & Freshwater Biology and an advanced treatment of particular aspects from the molecular and cellular to the ecosystems level of investigation.

1 This specification provides a concise summary of the main features of the programme and the learning outcomes that a typical student might reasonably be expected to achieve and demonstrate if full advantage is taken of the learning opportunities that are provided. More detailed information on the learning outcomes, content and teaching, learning and assessment methods of each course can be found in course handbooks and other programme documentation and online at www.gla.ac.uk/ The accuracy of the information in this document is reviewed periodically by the University and may be checked by the Quality Assurance Agency for Higher Education.
Particular strengths of the Programme are: a) wide experience of fieldwork; b) detailed treatments prepared by active scholars and researchers in Marine & Freshwater Biology of 1) animal diversity and its classification 2) experimental design, quantitative analysis and ethical aspects of scientific work 3) evolution and ecology, including practical issues of wildlife conservation and environmental management such as dealing with aquatic pollution 4) the mechanisms and evolutionary origins of animal behaviour including consideration of animal welfare issues 5) the range of aquatic environments.

The Principal Aims are:
- To equip students with a fundamental understanding of Marine & Freshwater Biology, and a competence in relevant scientific methods
- To stimulate and foster a sense of excitement in Marine & Freshwater Biology as an approach to understanding living organisms
- To provide advanced knowledge, understanding, scholarship and critical judgement appropriate for professional employment or further study in Marine & Freshwater Biology or a related discipline
- To develop those advanced transferable, intellectual, interpersonal and practical skills which may be of advantage in a wide range of employment and further study
- To develop in students the flexibility to adapt to change throughout their working lives

9. Intended Learning Outcomes of Programme:

The programme provides opportunities for students to develop and demonstrate knowledge and understanding, skills, qualities and other attributes in the following areas:

Knowledge and Understanding
By the end of this programme students will be able to:
- demonstrate knowledge and understanding of the central facts and concepts of Marine & Freshwater Biology
- demonstrate an understanding of professional ethics in science and of the principles that can guide ethical decision-making in biological controversies
- demonstrate an advanced understanding of the relevance of knowledge of Marine & Freshwater Biology to problems in areas such as environmental management and animal welfare
- demonstrate knowledge of the diversity of life and the methods by which living organisms can be classified
- demonstrate advanced knowledge and understanding of the main investigative methods used in Marine & Freshwater Biology, both in the laboratory and in the field

Skills and Other Attributes
By the end of this programme students will be able to:

Subject-specific/practical skills
- demonstrate their ability to learn advanced topics in Marine & Freshwater Biology independently
- carry out, under supervision, a significant research project and report its findings

Intellectual skills
- solve advanced problems of a numerical or logical nature in Marine & Freshwater Biology
- selectively extract information from published sources and use this to present critical reviews of the current state of knowledge in topics relevant to Marine & Freshwater Biology

Transferable/key skills
- use computers to search databases, compose reports for written and oral presentation and analyse data
- work co-operatively in a team to carry out and present the results of research in Marine & Freshwater Biology
- demonstrate their ability to manage their time appropriately in order to prioritise tasks and meet deadlines

10. Typical Learning and Teaching Approaches:
A range of teaching methods are used during the programme, including:

- Lectures
- Laboratories
- Workshops
- Group projects
- Poster presentations
- Field trips
- Tutorials
- Seminars
- Honours research project

11. Typical Assessment Methods:

A number of different methods are used to assess the courses which make up the programme, including:

- Written degree examinations (essays, objective testing, short answers and problem-solving)
- Class examinations
- Laboratory reports
- Field course reports
- Essays
- Honours project report
- Poster presentations
- Oral presentations
- Peer review of group work

12. Programme Structure and Features:

The BSc Honours programme normally lasts 4 years, comprises both compulsory and optional courses, and comprises 480 credits (120 credits each year).

One of these project courses:
Life Sciences Honours Options:
The programme will prescribe a mixture of compulsory, recommended and/or suitable Honours options courses. In addition, the list of available Honours option courses is liable to change each session. The options available in the current session can be found via the University’s Course Catalogue (www.gla.ac.uk/coursecatalogue).

Features:
Students may apply to study abroad during either Year 2 or Year 3; this is subject to approval by the School of Life Sciences.
Years 1 and 2 may be available for part-time study. Years 3 and 4 are normally only available on a full-time basis.

Regulations:
This programme will be governed by the relevant regulations published in the University Calendar. These regulations include the requirements in relation to:
(a) Award of the degree
(b) Progress
(c) Early exit awards
(d) (For undergraduate programmes, where appropriate) Entry to Honours

www.gla.ac.uk/services/senateoffice/policies/calendar/

General notes:
